

ISYS90049 – Digital Business Analysis
Project 2 (Group) – 35%
Strategy Analysis and Solution Evaluation

Introduction

This *group project* is a continuation of the previous assignment. You are expected to work with the same team. It is due on **Tuesday, 26th May 2026, 9pm (Week 12)**.

The senior management of **CollectaLab Pty Ltd** was impressed with your Analysis Plan. Now, they would like you to conduct a *Strategy Analysis* to show them how *digital solutions* could help address the current issues they are experiencing and enhance the efficiency of their business operations. You are also asked to include a *Solution Design* to demonstrate how the proposed solution (*just **one solution per group***) offers value to the organization. Since they have limited exposure to digital technologies, they are keen to understand any possible solutions and the impact on their business performance.

As in the first assignment, you are expected to conduct research to gather additional information to complement the details provided, which will help you perform a thorough strategy analysis. You are allowed to make any assumptions as long as they are clearly stated, not in conflict with information provided in the case description, reasonable and applied consistently.

Tasks

Based on the case provided, your group needs to do the following tasks, which are structured into five sections:

1. Current State Analysis (see Milani (2019), Chapter 8)

Describe how the business currently functions and identify problems and pain points.

Details to include:

- Business requirements, specifying the high-level requirements necessary to address the business needs from a business perspective.
- Description of the current state, explaining how the business currently functions.
- Two customer journey maps for two personas representing (1) warehouse staff and (2) senior management (e.g., Managing Director), to show their interaction with the current system (see Milani (2019), Section 8.3.3). It is necessary to identify problems and pain points.

2. Future State Analysis (see Milani (2019), Chapter 13)

Describe the future state enabled by your proposed digital solution.

Details to include:

- Description of the future state
- At least three business goals and five SMART objectives with justification (see Milani (2019), Section 13.1)
- Scope of the solution and constraints (see Milani (2019), Section 13.2)
- Changes to the customer journey maps that will address the issues found in the current state.

3. Change Strategy (see Milani (2019), Chapter 14)

Explain what the business will need to do to get from the current state to the future state.

Details to include:

- Gap analysis (see Milani (2019), Section 14.1)
- Readiness assessment: Assess whether the organization is ready for the change (see Milani (2019), Section 14.7)
- Recommended change strategy.

4. Risk Assessment (see Milani (2019), Section 13.5)

Identify and analyse possible risks that might emerge as a result of implementing the recommended change strategy.

Details to include:

- Identification of at least five risks
- Explanation of the *consequence, probability, impact, and treatment* for each risk identified (see Milani (2019), Section 13.5.3).

5. Solution Design (see Milani (2019), Chapter 15)

Your group might identify a few possible options, but you need to agree on and select **one solution** that you believe would be the most appropriate for the organization. Present your proposed solution to achieve the future state. The solution may incorporate technology (hardware and/or software), processes, organisational changes, and people. It is not necessary to encompass all these elements in your solution.

Details to include:

- Description of the proposed solution
- Identification of two KPIs to monitor the performance of your solution (see Milani (2019), Section 10.2)
- Brief explanation of how you are planning to obtain the data for those KPIs and what an appropriate timeframe would be to measure them.

You also need to report your group's analysis process in two appendices.

Appendix A: Case Analysis Process Reflection

- **Learning Integration:** Your group must provide two detailed, concrete examples demonstrating how specific lecture or tutorial learning shaped your analysis. This proves the work is a product of your learning rather than generic AI output.
- **Active Decision-Making:** Explicitly explain the reasoning behind your group's analysis, documenting where and why AI outputs, if any, were accepted, modified, challenged, or rejected. This demonstrates human agency and the ability to critically evaluate the accuracy of AI-generated content.

Appendix B: AI Use and Student Contribution Declaration

- **Transparency and Accountability:** You must quantify the proportion of human contribution (*as a group*) and clearly describe what that contribution involved (e.g., idea generation, analysis, writing, editing, decision-making).
- **Verifiable Proof:** Rigorously justify your claims with concrete evidence (e.g., discussion logs, change logs, or annotated AI outputs showing human revisions). The provided proof should demonstrate your contribution and decision-making process.
- **Copyright and Data Privacy Restriction:** *Do not upload the provided teaching case or any other copyrighted subject materials directly into GenAI tools.* Instead, synthesise and input your own notes, summaries, or specific extracted data points rather than submitting the entire proprietary document to external systems.

Key Details

Word Limit: Approximately 4,500 words ($\pm 10\%$). The cover page, table of contents, references, and appendices are excluded from the word count. The text in tables is counted towards the total word limit. Any content beyond the specified limit will not be marked.

Suggested Format: It is highly recommended that you use the provided template, which is already correctly formatted. As a general guideline, use a 12-point font size and 1.5-line spacing. Figures and tables may follow different formatting styles, provided they are professionally presented and optimized for readability. Tables and figures should not span across pages whenever possible. *Tables must NOT be inserted as images to circumvent the word count.*

References: You must include a Reference list using APA style at the end of your report. Entries in the Reference list should be sorted alphabetically by author, then by year of publication for works by the same author(s). Every single idea you borrow from someone else should be cited (*author, year*) in your report. Direct quotations, if used, should be in quotation marks (“...”) and should be EXACT. The citation for direct quotations must include the page number of the source (*author, year, page#*).

Due date: Tuesday, 26th May 2026, 9pm (Week 12)

Submission: Your report should be submitted as a **PDF** document to reduce formatting issues and ensure consistency across different devices and platforms. Submit your report electronically via Canvas LMS by the above due date. Only one group member needs to submit. When you submit your Assignment, please check the Turnitin similarity report regarding plagiarism.

Group Member Evaluation: The group member evaluation assesses individual contributions to ensure fairness and teamwork. **Each student must evaluate all teammates** using a rubric (see below). Students scoring 4 or lower in most criteria may receive a penalty. Evaluations must be submitted via FeedbackFruits on LMS; failure to submit will exclude your evaluation from consideration.

Marks: 35 marks

Late Penalty 10% of the total possible assignment marks (i.e., 3.5) will be deducted per day for late submissions.

GenAI Use Policy: FEIT allows the use of Generative AI (GenAI) in open assessment tasks. Using GenAI is not an academic integrity breach on its own. However, your submitted work must still be your own, and you remain fully responsible for meeting all academic integrity requirements – this includes properly acknowledging and referencing any GenAI you use. We encourage all students to take shared responsibility for their learning and consider potential impacts on secure assessment tasks.

In this subject, you are allowed to use GenAI for this assignment. However, AI tools should be used *appropriately* to support your study. If

you choose to use GenAI in completing the assignment, please follow the recommendations outlined in this specification (see the next section). If you are unsure, consult the teaching team for guidance (e.g., posting on Ed Discussion under the “AI Use” category).

Timeline

Task	Suggested Completion
1. Review and update your group <i>Governance Plan</i> to include the allocation of tasks to each member. Submit the updated plan via LMS under Assignment > Assignment 2: Updated Governance Plan.	End of Week 8
2. Each student <i>posts</i> the draft work for their section on the LMS Group Homepage – Discussions	End of Week 9
3. Each student <i>reviews</i> the draft work of other members and posts their feedback on the LMS Group Homepage – Discussions	End of Week 10
4. Post your <i>complete, reviewed</i> draft report on the LMS Group Homepage – Discussions	Tuesday of Week 11
5. Teaching staff reviews full draft reports and provides high-level, general feedback	Wednesday of Week 11
6. Prepare and submit the <i>Group Report</i>	Start of Week 12
7. Submit the online <i>Group Member Evaluation</i>	End of Week 12

A2 Report Marking Rubric

Your report will be assessed using the marking rubric with the specified criteria below. The rubric has a total of 100 marks.

Note: Individual group members' marks may be equal to or lower than the total group mark, depending on the group member evaluation.

Criterion	Exceeds Expectations (High) 75%–100%	Meets Expectations (Medium) 50%–74%	Below Expectations (Low) 0%–49%	Marks
<i>Executive Summary</i>	Includes clear, well-justified details that can be used to make a business decision.	Provides a reasonable summary with some useful detail, but not enough to confidently make a business decision.	Not included, very limited, unclear, or poorly written.	5
<i>Current State Analysis</i>	Provides a clear and detailed explanation of the business requirements and how the business currently functions. Personas and journey maps clearly demonstrate the issues users are facing. Affected processes and touchpoints are well identified.	Provides a generally sound explanation of the business requirements and current operations. Personas and journey maps demonstrate some key issues, but some details, affected processes, or touchpoints may be unclear or incomplete.	Missing, very limited, or poorly explained. Personas, journey maps, affected processes, or touchpoints are absent or unclear.	15
<i>Future State Analysis</i>	Provides a clear and detailed description of the desired future state. Goals and SMART objectives are logical and well developed. Scope and constraints are clear. Changes to the journey maps are clearly identified.	Provides a reasonable description of the desired future state. Goals and SMART objectives are included but may lack detail or alignment. Scope, constraints, or changes to the journey maps may be partly unclear.	Missing, very limited, or poorly explained. Goals, SMART objectives, scope, constraints, or journey map changes are absent or unclear.	15
<i>Change Strategy</i>	Clearly explains the gaps between the current and future states and provides useful actions to guide the change. The readiness assessment and recommended change strategy are well developed and appropriate.	Provides a reasonable explanation of the gaps between the current and future states, but some actions, readiness considerations, or elements of the change strategy may lack detail or clarity.	Missing, very limited, or poorly explained. Gaps, readiness assessment, or change strategy are absent or unclear.	15
<i>Risks</i>	Identifies and analyses at least five relevant risks clearly, including consequence, probability, impact, and treatment for each.	Identifies at least five risks, but some analysis is incomplete or lacks clarity in consequence, probability, impact, or treatment.	Fewer than five risks identified, or risk analysis is very limited, incomplete, or inaccurate.	10
<i>Solution</i>	The proposed solution is well suited to the problem or opportunity. All required deliverables are included and clearly explained. Two relevant KPIs are well defined and measurable.	The proposed solution is generally suitable, but some elements may be underdeveloped, unclear, or slightly misaligned. Two KPIs are included, though they may lack clarity or measurement detail.	Missing, very limited, or poorly aligned to the problem or opportunity. KPIs are absent, unclear, or not measurable.	15

<i>Presentation and References</i>	Report is professionally presented, clearly structured, neatly formatted, and written with very good grammar and expression. Arguments are well supported by relevant literature, correctly referenced, and supported by a complete reference list.	Report is reasonably well presented, but there may be some issues with structure, formatting, grammar, or clarity. Literature is used and references are included, but there may be some issues with support, consistency, or referencing accuracy.	Report is poorly presented, difficult to follow, or contains substantial issues with formatting, grammar, or expression. Very limited use of literature, missing references, or poor referencing.	5
<i>Appendix A: Case Analysis Process Reflection</i>	Insightful reflection on the problem-solving journey. Provides two detailed, concrete examples explicitly demonstrating how specific lecture/tutorial learning shaped the analysis. Explicitly details the logic of the analysis, documenting where and why AI outputs were accepted, challenged, rejected, or modified.	Mostly a detailed reflection on the problem-solving journey. Provides two concrete examples explicitly demonstrating how specific lecture/tutorial learning shaped the analysis. Details how AI accuracy was verified and AI output was critically evaluated, though it may lack some depth or rigorous detail.	Poor reflection on the problem-solving journey. Fails to provide two clear examples of applying lecture/tutorial concepts, or examples are vague/unrelated. Lacks evidence of critical evaluation.	10
<i>Appendix B: AI Use and Student Contribution Declaration (Student Contribution + Prompts)</i>	AI use is fully transparent. AI Appendix is comprehensive, clearly organized, and includes all specific prompts. Explicitly quantifies the proportion (e.g., 80%) and defines the specific nature of the human contribution. Crucially, these claims are rigorously justified by concrete, verifiable evidence (only samples of evidence are needed to be submitted, e.g., discussion logs, change logs, annotated AI outputs showing human revisions, or comprehensive drafting notes). Demonstrates ethical AI use, human agency, competence, and complete, evidence-backed accountability.	AI use is acknowledged. AI Appendix is present and includes prompts. Clearly quantifies the proportion and specifies the nature of the human contribution. Provides solid, verifiable samples of evidence (e.g., specific logs or annotations) that accurately justify these claims. The documentation clearly supports the stated human effort, though it may lack some depth or rigorous detail.	AI use is not declared, the AI Appendix is missing, incomplete (e.g., missing prompts), fails to declare the human contribution, or provides absolutely no verifiable samples of evidence (logs, annotations, notes) to justify the claimed human effort and decision-making.	10
Total				100

Group Member Evaluation Criteria

The following criteria will be used to evaluate your group members' performance in the group work.

Criteria	Advanced <i>Exceeds expectations</i> <i>Score: 10</i>	Competent <i>Meets expectations</i> <i>Score: 7</i>	Progressing <i>Expectations not fully met</i> <i>Score: 4</i>	Beginning <i>Expectations not met</i> <i>Score: 1</i>
<i>Attendance & Punctuality</i>	Attends all meetings, arrives early or on time, and is fully prepared and engaged.	Attends most meetings and is usually on time and prepared.	Attends some meetings but may be inconsistent or frequently late.	Rarely attends group meetings and is often late. Shows little commitment to schedule.
<i>Participation in Discussions</i>	Contributes actively and insightfully in every discussion, enhancing group understanding.	Regularly engages in discussion, providing relevant and thoughtful input.	Occasionally participates with basic input; contributions may lack depth or clarity.	Rarely speaks up or contributes little of value. May distract or withdraw from discussion.
<i>Task Completion & Work Quality</i>	Consistently completes all tasks early or on time, producing thorough, polished, high-quality work.	Completes assigned tasks on time with accurate, organized, and acceptable quality.	Sometimes completes tasks but needs reminders or support. Work meets minimum expectations but may have errors.	Frequently fails to complete tasks or submits them late. Work is rushed, inaccurate, or incomplete.
<i>Cooperation & Supportiveness</i>	Always encouraging, respectful, and actively works to support and uplift the group.	Generally cooperative, respectful, and contributes to a positive group dynamic.	Sometimes difficult to work with or only helps when asked.	Often uncooperative, negative, or dismissive of team members.
<i>Contribution to Group Success</i>	Plays a key role in the group's success, showing leadership, initiative, and dedication.	Makes steady, meaningful contributions to group goals.	Makes occasional contributions; effort is inconsistent.	Makes minimal or no contribution; relies on others to carry the project.
