Contact

For queries or to contact teaching staff there are a few options:
IMPORTANT: Before contacting staff please check LMS discussion boards and read through the subject page and announcements your question may be answered here

- 1) For lectures please contact Marc or Rod
- 2) For tutorials or assessment please Christina

DO NOT use the Canvas Inbox.

Protocols

AS consultants, our clients expect the highest levels of professional behaviour.

The ACS is the peak professional body for the ICT Industry and offers a [Code of Professional Conduct](#).

Promptness

- We are Postgraduates at the University of Melbourne
- Employers will be anticipating this discipline
- Marks may be deducted if you are late to your assignment presentations.

Active listening

- Ask questions, interact, be prepared to draw on your own experiences
- Participation is encouraged
- Use the breaks wisely.

Protocols

Flexibility

- This subject tends to generate discussion (this is encouraged)
- We use practical group and individual exercises in class that also activate people
- We also get asked challenging and relevant questions
- Therefore, some lecture content may be carried over to the next week
- We may also explore additional content depending on where your interests are (and the questions we're asked)!
- We have mixed up the delivery format of this subject to raise your levels of comfort.

Expectations

- Participate in group exercises
 - How do you handle non-contributors?
- Group Assignment Self Assessment
 - To be completed by each group member
- Submit work via Turnitin on LMS
 - Academic Honesty
 - Page numbers
 - Headings and footers
 - File names – must have group name or student name in the file name.

Expectations

Above all else: **Have a go!**

We are going to push you outside your comfort zone a little:

- Presentations and speaking: every week!
- Assignments and activities that are a bit 'different'
- Guest speakers that will challenge you and your expectations
- Asking you to solve some deliberately unstructured problems, requiring you to manage uncertainty
 - That's what consultants do

**Are you serious about being a consultant
– then this is what you **MUST** do.**

Learning Outcomes

The goal:

- Reflective practitioners conscious of theory
- Students will be able to deliver IT information in an informative and engaging professional manner
- The classes are a balance of theory and practice
- Readings and assignments more theoretical
- Class discussions and exercises are putting these ideas into practice.

Learning Outcomes

What will this subject do for me?

What this subject is	What this subject is not
• A conceptual, theoretical and practical examination of consulting and industry • A broad examination of all the things we consultants have in our heads and consider at all times • Insight into the 'real world' of information systems practice • A chance to listen to the trials, tribulations and experience of senior management (partners, CEOs) • An opportunity to determine whether this life is for you!	• Just another professional skills program • Something where you just learn how to present all the time • Something for introverts to become extroverts • A job interview (though plenty of people end up in consulting!).

Best outcomes from this subject?

- Two-way communication – this is a practical subject
 - Be prepared to ask in class
 - We understand the issues of ‘face’ or embarrassment: try to push through!
- This is a **safe environment**:
 - We are here to help refine your ideas
 - Ask for clarification (especially idiomatic speech)
 - Speak up if you disagree with the lecturer or someone in your team
 - Ask any and all questions – we will give you straight and honest answers
 - This is your opportunity to learn about life in industry!

Assessment Overview

Assignment 1:

- A technical report for non-technical management
- 20 marks includes 5 marks presenting in class and 15 marks for the report

Group Assignment 2:

- Planning and proposing a consulting assignment
- 40 marks includes 10 marks presenting in class and 30 marks for the proposal
- To be completed in group sizes of 4 - 5 students

Individual Exam

- 2 hour open book exam 40% of marks
- Date announced when the exam timetable is released

Assessment Overview

Assignment	Due	Marks
1a: Presentation	Week 5 – Starting 1 April in tutorials	5
1b: Written report	Week 6 – Thursday 16 April	15
2a: Presentation	Week 12 – 25 May	10
2b: Proposal	Sunday 31 May	30
Exam - Open book	Scheduled in the University Exam period	40

Assignment procedure

- Assignment 1 and 2 are presented in class first
- Presentations are worth up to:
 - 5 marks for assignment 1
 - 10 marks for assignment 2
- Get feedback from us and the class
 - Submit written version electronically within 1 week
- Complete **Team Healthcheck**
 - Check team performance prior to submission
- Including **group self-assessment sheets**
 - This is intended to reflect good consulting practice.

Expectations

Referencing

- APA Referencing Style
 - If you copy or use material from another source you must reference it in your work
- Give IN TEXT references - not just a bibliography
- Your referencing does affect your mark
- The University has a very strict policy on plagiarism
- If you do it twice you risk failure in the subject and sent before the academic board
- The University standards are available on Canvas, please consult this information

Plagiarism

- The University takes it (very) seriously
- You are expected to know the rules and what constitutes plagiarism
 - Plagiarism includes 'cut and paste and edits' without citations)
- *Make sure you give correct citations and references.* See "Melbourne University Referencing Guide" and click on APA Guide.
- Make sure your name or group names in the file name e.g. abc_group_assignment1.pdf
- Assignments are to be submitted electronically via LMS Turnitin in MS Word format or PDF.

Don't Even Think About it!

Acknowledging AI tools and technologies

AI Declaration

Personal statement of acknowledgement describing how you have used AI tools and technologies to prepare an assessment. Creates clarity and transparency about:

- the specific AI tools or technologies you used
- what you used the AI tools or technologies for in the process of completing your assessment
- the prompts you used in the AI tools or technologies
- an explanation of how the output from the AI tools or technologies was used in your work.
- This must be included in your Assignment Submissions

Researchers: Specific guidance for University of Melbourne researchers available [here](#).

Academic Integrity at the University of Melbourne: More information about Academic Integrity and how to uphold good scholarship [here](#).
